

Shutter Score Instructions

Submitting images for digital competitions is done through the website Shutter Score. There is a link to this site on the Competitions web page. Before submitting your image, it needs to be resized so it is small enough to be uploaded to the Shutter Score site and large enough to project in high detail. If the largest dimension of your image is the horizontal side (horizontal image) then resize that length to 1920 pixels. The resizing program will then automatically resize the vertical to keep the original proportions the same. If the largest dimension of your image is the vertical side (portrait) then resize that length to 1080 pixels. The resizing program will then automatically resize the horizontal to keep the original proportions the same. Your image is now ready to be uploaded to Shutter Score.
